Why Re-Pipe When You Can ePIPE®?

Residential and Commercial ePIPE® Services

ePIPE® eLINER

[About Us](#) [ePIPE®](#) [eLINER](#) [Projects](#) [Testimonials](#) [Contact](#)

Trenchless eLINER Restoration

The Trenchless Cured-In-Place Pipe-Lining (eLINER) offers the home and commercial building owner substantial savings over traditional restoration methods, which require extensive repairs to the building after the pipes are replaced. Roof stacks, horizontal lines and sanitary drains can be restored from the inside using our "Pipe Within A Pipe" system – without the mess and added reconstruction costs of traditional methods.

**We want to make the ACE DuraFlo® solution as easy as possible for you to understand!
That's why our website is designed to be informative and helpful. Check it out.**

LeadSmart®

LeadSmart®

Based on proven barrier coating principles used by water utilities, ePIPE is focused on pipe repair using in-place restoration of small diameter pipes. Our pipe repair includes pipes as small as 6mm (1/2") in diameter.

Through an international network of company-owned and licensed applicators, ePIPE epoxy lining is installed in homes, hotels, hospitals, schools and more, providing protection against corrosion, leaks, and lead.

EXHIBIT I

ePIPE is patented technology offers the best in proactive water leak and contamination prevention and is protected by US Patents #7160574, #7517409, #7858149, #8033242, #8206783, #8343579, #8354140, #8399813, #8524320, #8696823 and #8795768, Canadian Patent # 2707023, European Patent #2099581 with multiple international patents pending. As an alternative to complete pipe replacement, the ePIPE system is based on "in-place" pipe restoration technology.

Why Re-Pipe When You Can ePIPE?

REMEMBER... There is only one ePIPE® and it is protected under US Patents 7160574, 7517409, 7858149 and other patents pending.

EXHIBIT J

Ace DuraFlo®**Florida Pipe-Lining
Solutions, LLC®****Desert Regional Medical Center**

Palm Springs, Ca

The Desert Regional Medical Center located in Palm Springs, CA is a 388 bed, full-service, acute care facility. The main facility was built in 1951 and has undergone extensive modernization.

The Problem: The problem they were experiencing was related to pipe corrosion in the piping system in the facilities chilled water and heating system. The two pipe heating-cooling system was made of Schedule 40 black steel main lines with soft copper branch lines. Pipe diameters ranged from 1/2" to 2 1/2". In addition to the main line being encrusted the soft copper branch lines had developed pinhole leaks. Strainers at the heating units had been installed previously to try and strain out the rust particles from the main line but now they were constantly getting plugged up by the debris. Given the need to have little or no patient or operational disruption, the traditional re-pipe option was ruled out by the facilities engineers.

The Solution: ACE DuraFlo® in-place pipe restoration. The piping system was isolated and conventional repairs carried out and then the piping system was restored in-place using the ACE DuraFlo® system of in-place pipe restoration. By restoring the piping system in-place the facility was able to remain in full operation.

**Ace DuraFlo®****Florida Pipe-Lining
Solutions, LLC®****BOEING EVERETT FACTORY**

Everett, WA

ePIPE® Chosen to Protect World's Largest Aircraft Facility

The Client: One of the world's largest aero-space manufacturers, and an organization respected for its precision engineering and quality construction. When looking for a long term solution to preserve and protect some problem piping at their Puget Sound assembly facility, engineers investigated numerous solutions. Their Puget Sound Facility boasts the largest building in the world and is the assembly location for the company's jumbo jet fleet, including some of the world's largest jets.

Because the pipe was located under the tarmac in the flight line assembly area, engineers quickly determined that conventional digging and replacement of the pipes was simply out of the question. Fortunately, the Puget Sound engineering team was aware of the ePIPE® technology that the company had utilized in their fabrication facility in Auburn, Washington two years previously.

Satisfied with their past experience using ePIPE® restoration, and convinced that ePIPE® was the right solution for them at the assembly facility, the work was scheduled. The ePIPE® Team promptly responded to the challenge using the patented ePIPE® solution to clean and reline the pipes in place, without disturbing the tarmac.

The Result: The Project was completed with no delay or disruption to the customer's schedule.

Ace DuraFlo®**Fort Knox Army Base**

Fort Knox, Kentucky

The Army Corps of Engineers Picked ACE DuraFlo®

Background: BL Harbert International performs construction projects all over the world for the United States government. They recently finished 6 new administration buildings and 6 new readiness buildings. That's when the Army Corps of Engineers told them that they had to line the new copper pipes.

The Problem: The buildings on Fort Knox Army base have been experiencing piping failures in as little as 10 years. When The Army Corps of Engineers investigated the problem they found that the base had hard water and thus also a high level of copper content. Soon after the investigation, the Army Corps of Engineers mandated their contractors to use only plastic pipe on new construction. That mandate came after the BL Harbert project was started. In response to this situation, the Corps decided to handle the problem before it occurred and before the building was occupied.

The Solution: BL Harbert International and the Army Corps of Engineers picked ACE DuraFlo and their ePIPE® process to perform the first restoration work in both of their lengthy resumes. The project originally schedule for 12 weeks was condensed into a 6 week period at the request of the clients. Two ePIPE® restoration teams completed 2 buildings a week. The total project encompassed approximately 400,000 sq. feet.

**Ace DuraFlo®****The Waterford**

Kensington, MD

**149 Units in DC Highrise's Piping System Restored with
"water-on" Every Night**

The Problem: The Waterford Condominium in Kensington, MD is a 149 unit, 14 story high-rise building that was experiencing pinhole leaks in its copper domestic water system. The condominium needed a cost-effective way to solve the problem of leaky pipes without the cost, construction times and destruction often associated with a traditional re-pipe.

The Solutions: The Waterford chose ePIPE®, its two-hour return to service product and the advantage of choosing the most experienced epoxy lining company in the industry.

The potable water pipes and recirculating system were relined within 20 weeks. Using its patented process, ePIPE® was able to fix the problem without severe disturbance to

Council**

The U.S. Green Building Council is a 501(c)(3) non-profit community of leaders working to make green buildings available to everyone within a generation.

**Approved For Internal
Epoxy Barrier Pipe
Coating Material**

The purpose of this acceptance criteria is to establish requirements for internal epoxy barrier pipe coating materials for water pipe to be recognized in an ICC Evaluation Service, Inc. (ICC-ES), evaluation report under the 2003 International Plumbing Code® (IPC) and the 2003 International Residential Code® (IRC). Bases of recognition are IPC Sections 102.4, 105.4 and 108.7, and IRC Section R104.11.

**Certified by NSF
International**

This certification recognizes compliance with NSF/ANSI 61. Products appearing in the NSF Official Listing are authorized to bear the NSF mark.

Certificate of Listing

IAPMO Research and Testing, Inc. is a product certification body which tests and inspects samples taken from the supplier's stock or from the market or a combination of both to verify compliance to the requirements of applicable codes and standards. This activity is coupled with periodic surveillance of the supplier's factory and warehouses as well as the assessment of the supplier's Quality Assurance System.

This listing is subject to the conditions set forth in the characteristics below and is not to be construed as any recommendation, assurance or guarantee by IAPMO Research and Testing, Inc. of the product acceptance by Authorities Having Jurisdiction.

US, CANADA AND LATIN AMERICA

ANSI/NSFstd61 – National Sanitation Foundation, listed Standard 61, immediate return to service hot and cold potable water pipes.

PLUMBING CODES

UPC® – Uniform Plumbing Code, USA and Canada – listed for application to metallic and non metallic pressurized pipes.

IPC® – International Plumbing Code, listed domestic water piping.

IRC® – International Residential Code compliance, listed domestic water piping.

ICC-NES – International Code Council, National Evaluation Services- listed domestic water piping, PMG 1009 (Plumbing, Mechanical and Gas Code).
